Re: Field CTO — Cursor

Dear Cursor Team,

Technology has been part of who I am for as long as I can remember. I was the kid constantly drawn to computers, software, and figuring out how things worked. I built my first computer when I was eight years old, and from that point forward it never felt like a hobby; it felt natural. I have always been fascinated by technology, but even more by the impact it can have on people, teams, and businesses when it is explained clearly and implemented well.

Right out of high school, I went to work at Apple as a sales representative, and that experience shaped how I think about technical communication. It taught me how to explain powerful technology in a way that connects with real people. I realized early that I did not only enjoy the technical side; I loved helping people understand what was possible, adopt better tools, and change the way they worked.

From there, I built my own technology and web development company. Over the years, I have worked closely with businesses, developers, teams, and clients across many environments. Being on the operator side gave me a practical understanding of implementation, workflow design, team enablement, support pressure, and the reality of making technology adoption actually stick inside day-to-day operations.

When I discovered Cursor, it felt like the future of software development. I began using it personally early on and then implemented it across my own teams, employees, and clients because the value became obvious quickly. The productivity gains, workflow improvements, and developer experience changed how we approached building software.

My excitement for Cursor didn't start with this application. I've believed in the product for a long time, and supporting it has become part of my public identity because I genuinely love what the company is building and where this space is headed. We're in the middle of a massive shift in how software gets made, and enterprises across the country and around the world need help adopting faster approaches to development, iteration, and organizational learning.

What draws me most to the Field CTO role is that it sits exactly at the intersection where I have been doing my best work: **technical depth, adoption strategy, implementation judgment, executive communication, and influence**. I understand how developers think, but I also understand the constraints companies face when adopting new technology. I have spent years helping people navigate change, build workflows, improve efficiency, and embrace tools that move them forward.

I would be excited to help engineering leaders understand not just what Cursor can do, but how to evaluate it, operationalize it, and translate its capabilities into real organizational impact. This opportunity feels less like a random career move and more like a natural progression of where my experience, energy, and conviction have already been leading me.

Thank you for considering my application. I would be grateful for the opportunity to bring my operator mindset, technical credibility, and genuine belief in Cursor's mission to the Field CTO team.

Sincerely,

David Solheim

## ROLE FIT

Technical translator between engineering reality and business adoption: AI development workflows, systems-level evaluation, client strategy, operator execution, and executive-facing communication.
