

Strategic technical leader and AI adoption specialist focused on helping organizations understand, evaluate, and operationalize AI in software development. As founder of Teton Web, built AI-powered platforms, agent systems, and developer workflows that mirror enterprise adoption challenges. Experienced in executive-level technical conversations, systems-level evaluation, adoption strategy, and translating AI capabilities into organizational and business impact for engineering leaders.

CORE COMPETENCIES

AI-Driven Software Development & Adoption
Advanced Cursor, Composer 2.5, custom skills, sub-agent orchestration, multi-agent development workflows, AI maturity framing, and workflow transformation.

Enterprise Client Strategy & Influence
Technical proposals & roadmaps, executive-level client engagement, bridging technical capabilities to business impact, adoption strategy design, and strategy sessions with technical leaders.

Technical Architecture & Platform Leadership
Systems-level evaluation of AI developer tools; Next.js, Vercel, Convex, Neon, and Supabase full-stack platforms; GitHub, Linear, Slack, and Git integrations; remote/hybrid engineering workflows; SaaS architecture.

Rapid Innovation & Execution in Ambiguity
Self-improving agent systems, parallelized development workflows, fast-moving environments, continuous shipping of production AI tooling, and thought leadership on X.

TOOLS & SYSTEMS

PROFESSIONAL EXPERIENCE

- Founder & Lead Developer**
Teton Web Ventures LLC | Idaho Falls, ID | February 2026 – Present
- Founded and lead Teton Web, a specialized web development and AI orchestration consultancy delivering platforms, internal tooling, and adoption strategy for clients across industrial equipment, global nonprofit, insurance brokerage, and inventor-network markets. Serve as trusted technical advisor and de facto CTO on AI, platform, and web strategy.
 - Architected and productionized AI multi-agent orchestration systems that serve as force multipliers for development velocity, including Slack-based agents, cross-device automation, Linear/Slack task orchestration, and routine-maximization workflows. Used these systems to frame practical AI maturity, rollout risk, and workflow transformation for technical stakeholders.
 - Pioneered advanced Cursor and Composer 2.5 workflows that coordinate parallel sub-agents for issue execution and branch management. Public demos provided concrete proof points for AI-assisted software development maturity, adoption strategy, and engineering workflow transformation.
 - Led high-context client engagements, including major design-system proposal work, international platform/catalog delivery, and alumni-platform strategy facilitation. Comfortable operating as a peer to senior technical stakeholders while connecting architecture, implementation tradeoffs, and business outcomes.
 - Developing an all-in-one small business SaaS platform spanning website/CMS/CRM, realtime workflows, and AI. Manage proposals, contracts, financials, multi-tenant architecture, and product direction in ambiguous, fast-moving environments.

- Owner / Operator**
Solheim Technologies | January 2012 – September 2025
- Website Development & Platform Management**
- Built and managed hundreds of websites across Intuit Homestead, Wix, WordPress, Shopify, and Next.js, supporting clients from basic brochure sites to e-commerce and custom web applications.
 - Handled ongoing website operations including redesigns, migrations, domains, DNS, hosting coordination, content updates, storefront configuration, troubleshooting, and client training.

- Technology Operations & Automation**
- Operated a technology services business for small businesses and homes, resolving thousands of support cases across Windows, macOS, Android, iOS, networking, cloud, and dedicated-server environments.
 - Designed and maintained 50+ workstation business networks, Google Workspace profiles, IP printing, file sharing, backup/ data-retention policies, phone systems, security administration, and paperless iPad workflows that saved hundreds of hours annually.

KEY TOOLS, SYSTEMS & INNOVATIONS

Cursor Ecosystem: Advanced work with Composer 2.5 skills, sub-agent orchestration, and Linear-integrated workflows. **AI Agent Systems:** Slack agents, cross-device automation, task orchestration, routine-maximization workflows, and parallel development agents. **Core Stack:** Next.js, Vercel, Convex, Neon, Supabase, React Native, Expo, Figma, Linear, Slack, GitHub, Git, Stripe, Square, and Wasabi/B2. **Other:** AI adoption strategy, technical storytelling, remote dev workflows, SaaS platform development, client strategy, and product feedback loops.

ADDITIONAL

Active public voice on X (@davidtsolheim) sharing practical AI coding innovations and agentic workflow breakthroughs—demonstrating executive presence, thought leadership, and authentic alignment with AI devtool missions. Maintains parallel senior W2 development roles alongside founding Teton Web, ensuring ongoing exposure to enterprise development practices. US Remote (Idaho), available for strategic travel as needed.
